Stack Overflow for Teams has been a

Engineers should help solve the
hardest questions, the unknowns,
where being familiar with how the
product was built is essential. But we
don't want to keep answering solved
problems over and over again. That's
where Stack Overflow for Teams
really helps.

**Director of Engineering**
Elastic Cloud

As we started to use [Stack Overflow for Teams] and saw how nice it was to have a repository of information, we started to see it spread to other teams. Our customer support team started using it, our people success team started using it, next thing we knew, we had [Slack] integrations all over the place.

**Engineering**
Expensify

What we love about Stack Overflow for Teams is that it's a very dynamic tool...there's just so many ways to use this as a liaison between different teams and different knowledge bases.

# EaseDevLife

## Overview

**Languages**

━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━

EaseDevLife automates the process of creating demos for web applications and generating PDFs from URLs. It simplifies the task of creating demo videos by taking URLs as input and generating a video showcasing how each webpage looks. Additionally, it provides functionality to generate PDF files by combining multiple URLs.

● JavaScript 90.3%    ● CSS 1.4%
● HTML 7.4%    ● Shell 0.5%

## Tech Stack

- **Frontend**: React for building the user interface.
- **Backend**: Node.js for server-side logic and API endpoints.
- **Browser Automation**: Browserless for headless browser sessions to capture webpage screenshots.
- **PDF Generation**: PDF file format for creating documents from web content.
- **Containerization**: Docker for running Chromium headlessly in a container for PDF generation.

*Docker must be installed to execute the project, as it is used to manage and run Chromium headlessly within a container for PDF generation.*

## Installation

1. Clone the repository:

```
git clone https://github.com/Bhavye2003Developer/EaseDevLife.git
```

2. Navigate to the project directory:

```
cd EaseDevLife
```

3. Execute the setup script:

```
./setup.sh
```

4. Open two terminals:

   - In the first terminal, navigate to the frontend directory and start the development server:

     ```
     cd frontend
     npm start
     ```

   - In the second terminal, navigate to the backend directory and start the Node.js server:

     ```
     cd backend
     npm start
     ```

## Usage

Once the installation and setup are complete, you can access the project at the following URLs:

- Frontend (React): http://localhost:1234
- Backend (Node.js): http://localhost:8080

### Frontend

The frontend provides a user interface where you can input URLs to generate demo videos and PDFs.

### Backend

The backend server handles the requests from the frontend, processes the URLs, and generates demo videos using browser automation and PDFs from URLs.

## Contributing

Contributions are welcome! Please feel free to fork the repository, make changes, and submit a pull request.
